Bologna | Forlì

PROFESSIONAL PROFILE

Full-Stack Developer with over 5 years of experience in the design and development of REST and GraphQL APIs in Go, in the management of MongoDB and MySQL databases and in container orchestration with Docker and Kubernetes. Solid experience in the development of end-to-end digital platforms (backend and frontend with Vue.js and Node.js), both independently and as part of a team. Curious and committed to continuous learning, with an academic background in Big Data and Machine Learning.

WORK EXPERIENCE

Full-Stack Developer

Feb2021 - Jun2026 | Search On Media Group

- Development of management systems for training events and of a web application dedicated to participants.
- Design and development of REST APIs in Go with MongoDB and MySQL databases
- Use of goroutines for concurrent and efficient process management
- Creation and management of Docker images and container orchestration with Kubernetes (K8s)
- Full-stack implementation with MongoDB, Apollo GraphQL, Vue.js and Node.js; backend based on gqlgen
- Development of modules and features both independently and in collaboration with the team

Software Developer
